

Eliminating Irrigation Runoff will Prevent Pollution and help in Water Conservation

Do your part to conserve water, protect the environment. Inefficient landscape irrigation is considered a significant source of water waste and pollution. Current times call for smarter irrigation systems to be implemented. The City of Aliso Viejo is asking residents, homeowner associations, and businesses to re-evaluate their irrigation systems to ensure the proper amount of watering.

Doing so will eliminate runoff from entering the storm drain systems and maximize water conservation while also maintaining the beauty of the City.

Small changes can make a big difference in your monthly water bill, too! For more information about new state requirements for the prohibition of irrigation runoff, contact the Department of Public Works at 949-425-2530.
